

Project Design Phase-I Solution Architecture

Date	23 October 2023
Team ID	Team - 592460
Project Name	Project – Crime Vision: Advanced Crime Classification Using Deep Learning
Maximum Marks	4 Marks

Solution Architecture

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.
